HEAVER
HEALTHCARE
COMPUTING**

Streets Heaver operate at the forefront of Healthcare Computing and, in their field, are one of the largest suppliers of software in the UK. Their total dedication to the healthcare industry began in the late eighties when they developed the first version of Compucare, private patient administration system. 1995 saw their entry into the NHS clinical market with Clinical Manager. In addition to their established markets, the company now has an Occupational Health management system and an Electronic Patient Record.

Streets Heaver's clients include independent hospitals, clinics, NHS private patient units, clinical departments, occupational health centres and other healthcare related users. With an extensive number of sites in the UK, their healthcare systems can also be found in Ireland, Ghana and Malta, indicative of the company's approach to new markets and the ability to fulfil requirements away from their base in Lincoln (UK).

Their Mission;

To produce technologically advanced software for healthcare management, which, due to a policy of constant re-appraisal, will always meet the future needs of committed healthcare professionals.

CLINICAL MANAGER SQL

Therapy management system

Clinical Manager SQL is the latest evolution of our popular suite of programs for therapy management. It is now provided on the MS SQL server database.

It continues to provide simple intuitive access for planning, recording and administration of patient episodes but incorporates additional functionality, scalability and security to meet the ever more demanding requirements of the NHS. It is available with interfaces to most PAS and common third party systems and has been approved for linking to the National Care Record under NPfit.

■ One for all

Clinical Manager SQL can be used by a single department or several departments and displayed over a wide area network. Departments to benefit include:

- Physiotherapy
- Occupational therapy
- Dietetics
- Clinical psychology
- Speech and language therapy

■ Better for managers

- Streamline your outpatient booking and management systems
- Gain fast and easy access to patient data for analysis, audit and management
- Build a structured electronic patient record whilst recording patient activity data
- Automate and enhance your administrative activities for patients

■ Better for patients and staff

- Data entry is fast and reliably validated on entry
- Information and extensive analysis is available when required, quickly and easily
- Clinical Manager SQL is a true multi-user network ready system supporting integrated patient scheduling, mail system and diary to improve efficiency
- Allocation and utilisation of resources (rooms, equipment for example) efficiently managed and optimised using our resource management system
- Local reporting requirements can be customised and formatted effortlessly using our simple to use reporting templates

■ Appointment booking

This module supports multiple clinics of mixed type and works quickly in multi-user environments. Appointments can be either allocated visually or automated according to the patient's availability. The resource management facilities provide for the management of rooms or equipment. Appointments can be booked in single or multiple slots and also linked where multi-disciplinary appointments are required. Correspondence can be automated and communication achieved by letter, email or text messaging. Rescheduling is simple and links to the waiting list management system. Clinic lists are easily printed or emailed and "check-in" screens and custom reports complete the picture.

■ The patient module

- A patient record, shared between all departments including patient diagnosis
- Departmental episode / referral tables
- Goals and outcomes for each patient including assessments
- Integrated out patient booking system and master reference tables, easily added or amended at any time
- Archived patient documents – letters – discharge summaries and support for clinical audit activities
- Clinical monitoring
- Optional patient orientated treatment plans and clinical audit modules

■ Administration

- Powerful letter and form generator with spell checker
- Flexible patient reporter to generate assessments – discharge – summaries
- Patient notepad
- Equipment loans tracking
- Simple screen lists for referrals
- Automatic patients "alerts" system
- Cross department enquiries and history
- Patient document archiving system
- Mail, email and text messaging facilities

■ Patient reporting

Reporting has been redeveloped around Microsoft Reporting Services and now provides for simple to use templates for easy user customisation and formatting. Specialist reports include: waiting list management, first contact, end outcomes, Korner reports, waiting periods analysis and referral status. Reports can be output in a variety of formats including Excel, PDF and CSV. Third party report generators can also be used on the MS SQL server database.

■ System security

Access to the system is available through the program's own 6 digit login screen or directly from the Windows server login. The system meets the NHS standard security requirements for person based software systems in healthcare. At program login, available departments, menu choices and other options are automatically configured. Security access levels are determined by the locally set profile of the user or the Windows security access profile.

■ Customisation

Customisation is achieved through the use of parameters which can be set on or off. Fields can also be turned off if not required and mandatory fields selected by the client, all without programming.

■ Full integration

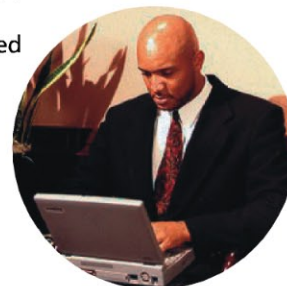

Clinical Manager SQL can be fully integrated with MS Office. We can also provide our interfacing engine to enable links to third party systems including PAS and the National Care Record.

■ Support

A full user manual is provided and an extensive (Windows style) help line is available throughout the program. We also provide telephone and on-line support either directly or over NHS Net.

■ Remote data collection

Remote data collection can be achieved using wireless tablet PCs or notebooks. Alternatively data can be collected remotely on Pocket PC or Palm computers using our PalmCall software and then downloaded onto the main system.
